SUMMARY

Software engineer with ~2 years of experience building and deploying production systems for enterprise clients. Hands-on across backend engineering, AI/RAG, industrial IoT, mobile applications, cloud infrastructure, and CI/CD. Experienced in owning production delivery, rebuilding deployment pipelines, designing data models, integrating external systems, and building secure multi-tenant AI platforms.

EDUCATION

Universiti Teknologi Malaysia

B.Sc. Computer Science (Software Engineering), Hons.

Sept 2021 – Oct 2024

- CGPA: 3.59 / 4.00

EMPLOYMENT

Software Engineer II**Evolve Technology Sdn Bhd (CLB Group)****Nov 2025 – Present**

- Lead development of 2 production platforms, including a multi-tenant AI agent platform reaching 97% tool-selection accuracy, secured by a red-team suite in CI.
- Deploy and maintain multiple client applications on AWS with Docker and automated CI/CD pipelines for build, test and release.
- Review code and mentor junior engineers; redesigned 10+ MySQL/PostgreSQL schemas, improving query performance by 30%.

Junior Software Engineer*Promoted after 11 months***Dec 2024 – Oct 2025**

- Rebuilt a Jenkins CI/CD pipeline from scratch (incl. 9 custom JAR dependencies) after the vendor team left mid-project, restoring automated deployment for a client insurance platform.
- Engineered Spring Boot and NestJS backend services handling 5,000 requests/day, cutting response latency by 25%.
- Developed native Android modules in Java/Kotlin for RFID and barcode scanning and bridged them into React Native warehouse handheld applications.

Programmer (Intern)**Pejabat Daerah dan Tanah Tampin****Sept 2023 – Feb 2024**

- Built and deployed a randomized lucky-draw system selecting 40 winners from 50,000+ taxpayer records, with zero reported disputes.

PROJECTS

Portfolio: muizkmz.vercel.app

Enterprise AI Integration Platform (EAIP)*FastAPI · LangGraph · pgvector · Next.js · Keycloak · MCP*

- Built and deployed a multi-tenant RAG and agent platform with PostgreSQL row-level security for tenant isolation and Keycloak OIDC authentication.
- Implemented a LangGraph agent across SQL, REST, and knowledge connectors with per-call authorization and cost limits; achieved 97% tool-selection accuracy and 0.91 Recall@1.

Industrial IoT Monitoring Platform*Node.js · React Native · React · MySQL · MQTT · Socket.IO · Laravel*

- Built an end-to-end platform (~64k LOC) ingesting machine telemetry over MQTT, evaluating alert rules and computing OEE in real time, streamed to a mobile app and admin console.
- Implemented default-deny JWT authentication across the API with CI coverage that fails on unauthenticated routes; integrated push, email, and Telegram alerting.

HAPPIsafe*Spring Boot · React Native · Vue.js · Redis*

- Built the React Native app and Vue.js admin panel, live on the App Store and Google Play, with real policy issuance through two insurer APIs: Chubb (REST/JWT) and Pacific/Rexit (SOAP/XML over mutual TLS).
- Integrated two payment gateways with RSA card tokenization, signature-verified webhooks and Redis locking against duplicate submissions.

Warehouse Management System*NestJS · Prisma · Vue 3 · React Native · Docker*

- Designed a 25-model schema with an RFID item-lifecycle state machine and build complete architecture design flow.

Also built: smart-pole IoT platform (MQTT, 3 front-ends) · RAG + text-to-SQL chatbot (n8n, Pinecone) · ESP32 freezer monitoring with real-time alerts.

SKILLS

Languages: TypeScript, JavaScript, Java, Kotlin, Python, PHP, SQL

Frameworks: NestJS, Spring Boot, FastAPI, Laravel, Node.js, React, Next.js, Vue 3, React Native (Expo)

Cloud & DevOps: AWS, Huawei Cloud, Docker, Jenkins, GitHub Actions, GitLab CI

Data & AI: MySQL, PostgreSQL (pgvector), MongoDB, Redis, LangChain, LangGraph, Pinecone, RAG, MQTT, ESP32

Languages (spoken): Malay (Native), English (Proficient)
