SUMMARY

Software engineer with ~2 years building and deploying production systems for enterprise clients. Hands-on with CI/CD (rebuilt a Jenkins pipeline from scratch), Docker and cloud deployment on AWS and Huawei Cloud, backed by full-stack experience across AI/RAG, industrial IoT and insurance platforms.

EDUCATION

Universiti Teknologi Malaysia

B.Sc. Computer Science (Software Engineering), Hons.

Sept 2021 – Oct 2024

- CGPA: 3.59 / 4.00

EMPLOYMENT

Software Engineer II

Evolve Technology Sdn Bhd (CLB Group)

Nov 2025 – Present

- Build AI agents and RAG features for production systems using LangChain and Pinecone vector retrieval.
- Architect and deploy production applications on AWS with CI/CD pipelines automating build, test and release.
- Redesigned 10+ MySQL/PostgreSQL schemas, improving query performance by ~30% on systems with 40,000+ records.

Junior Software Engineer

Promoted after 11 months

Dec 2024 – Oct 2025

- Rebuilt a Jenkins CI/CD pipeline from scratch (incl. 9 custom JAR dependencies) after the vendor team left mid-project, restoring automated deployment for a client insurance platform.
- Engineered Spring Boot and NestJS backend services handling 5,000 requests/day, cutting response latency by 25%.
- Wrote native Android modules (Java/Kotlin) for RFID/barcode scanning, bridged into React Native for warehouse handhelds.

Programmer (Intern)

Pejabat Daerah dan Tanah Tampin

Sept 2023 – Feb 2024

- Built and deployed a randomized lucky-draw system selecting 40 winners from 50,000+ taxpayer records, with zero disputes.

PROJECTS

Portfolio: muizkmz.vercel.app (additional projects and demos)

Enterprise AI Integration Platform (EAIP)

FastAPI · LangGraph · pgvector · Next.js · Keycloak · MCP

- Built a multi-tenant RAG and agent platform with Postgres row-level-security tenant isolation and Keycloak OIDC, deployed to production.
- LangGraph agent over SQL/REST/knowledge connectors with per-call authorization and cost limits: 97% tool-selection accuracy, 0.91 Recall@1; human-approved writes and a 37-attack red-team suite in CI with zero escalations.

Industrial IoT Monitoring Platform

Node.js · React Native · React · MySQL · MQTT · Socket.IO

- Built an end-to-end platform (~64k LOC) ingesting machine telemetry over MQTT, evaluating alert rules and computing OEE in real time, streamed to a mobile app and admin console.
- Enforced default-deny JWT auth across the API with a CI test that fails on any unauthenticated route; push, email and Telegram alerting.

Insurance Mobile Platform (Client Project)

Spring Boot · React Native · Vue.js · Redis

- Built the React Native app and Vue.js admin panel, live on the App Store and Google Play, with real policy issuance through two insurer APIs: Chubb (REST/JWT) and Pacific/Rexit (SOAP/XML over mutual TLS).
- Integrated two payment gateways with RSA card tokenization, signature-verified webhooks and Redis locking against duplicate submissions.

Warehouse Management System

NestJS · Prisma · Vue 3 · React Native · Docker

- Designed a 25-model schema with an RFID item lifecycle state machine, a 5-tier RBAC portal, and a Dockerized 3-tier stack.

Also built:

smart-pole IoT platform (MQTT, 3 front-ends) · RAG + text-to-SQL chatbot (n8n, Pinecone) · ESP32 freezer monitoring with real-time alerts.

SKILLS

Languages:

TypeScript, JavaScript, Java, Kotlin, Python, PHP, SQL

Frameworks:

NestJS, Spring Boot, FastAPI, Laravel, Node.js, React, Next.js, Vue 3, React Native (Expo)

Cloud & DevOps:

AWS, Huawei Cloud, Docker, Jenkins, GitHub Actions, GitLab CI

Data & AI:

MySQL, PostgreSQL (pgvector), MongoDB, Redis, LangChain, LangGraph, Pinecone, RAG, MQTT, ESP32

Languages (spoken):

Malay (Native), English (Proficient)
