

Muhammad Muizzuddin Bin Kamarozaman

Software Engineer II — Full-Stack, AI/RAG, Mobile & IoT Systems

+60 17-735 1336 | muizkamarozaman@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Software Engineer with 1.5+ years of experience shipping production full-stack, mobile, IoT, and AI/RAG systems. Built and deployed 5+ production systems for enterprise clients — including an insurtech platform with live dual-insurer and payment-gateway integrations, a warehouse management system with custom RFID hardware modules, a smart-city IoT monitoring platform, and an AI agent/RAG chatbot — using NestJS, Spring Boot, React Native, Vue.js, AWS, and LangChain/Pinecone. Currently building AI agents and retrieval-augmented generation (RAG) features for production deployment on AWS with CI/CD pipelines.

Core Technical Skills

JavaScript/TypeScript (React.js, Next.js, Vue.js, NestJS, React Native) · Java (Spring Boot) · PHP (Laravel) · MySQL · PostgreSQL · MongoDB · Redis · AWS · Huawei Cloud · Docker · Git/GitHub Actions/GitLab · Jenkins CI/CD · REST API Design · Mobile (iOS/Android, native Java/Kotlin modules) · IoT (ESP32, MQTT) · AI/LLM Engineering (LangChain, RAG, Pinecone, n8n, GPT-4o-mini) · Power BI

Professional Experience

Software Engineer II | Evolve Technology · CLB Group

Nov 2025 – Present

- Build and ship AI agents and RAG (retrieval-augmented generation) features into production systems, using LangChain and vector-database retrieval (Pinecone) for knowledge-grounded responses.
- Architect and deploy production applications on AWS with CI/CD pipelines for automated build, test, and release.
- Redesigned and optimized 10+ MySQL/PostgreSQL database schemas, improving query performance by 30% and supporting 40,000+ records/users.

Junior Software Engineer | Evolve Technology Sdn Bhd

Dec 2024 – Oct 2025

- Built and maintained enterprise applications spanning mobile, web, and IoT — including a 25-model warehouse management system (NestJS, Prisma, Vue 3, React Native) and an insurtech platform with live App Store/Google Play deployment.
- Hand-wrote native Android modules in Java/Kotlin (barcode and RFID scanning, hardware key handling) and bridged them into React Native via NativeModules/DeviceEventEmitter for warehouse handheld devices.
- Rebuilt a Jenkins CI/CD pipeline from scratch — including 9 custom JAR dependencies — after the original vendor team and pipeline configuration became unavailable mid-project, restoring automated deployment for the insurtech platform.
- Engineered backend microservices in Spring Boot and NestJS handling 5,000 requests/day, cutting response latency by 25%.
- Shipped React Native features to a production insurance app live on the App Store and Google Play, used by 50+ users.

Programmer & Assistant Technician (Internship) | Pejabat Daerah dan Tanah Tampin

Sept 2023 – Feb 2024

- Led end-to-end development and deployment of a randomized lucky-draw system, fairly selecting 40 winners from 50,000+ taxpayer records with zero disputes post-launch.
- Configured and integrated networked PCs across 4 departments, enabling centralized digital record access for 50+ staff.

Professional Projects

HappiSafe — Insurtech Mobile Platform — 10+ months, 400+ backend commits

- Built React Native mobile app and Vue.js admin panel on a Spring Boot backend, live on the App Store and Google Play; implemented a strategy-pattern dispatch architecture with quote → bind → pay → finalize state machines.
- Integrated two live insurer APIs end-to-end — Chubb (REST/JWT via Azure APIM) and Pacific/Rexit (SOAP/XML with mTLS, e-Cover Motor API v1.7) — handling real policy issuance.
- Implemented RSA card tokenization and two payment gateways (Razer Pay, PayDollar) with signature-verified webhooks and Redis-based duplicate-submission locking.
- Designed and shipped "Creamy," a two-agent AI chatbot on GPT-4o-mini with a hybrid knowledge base (database table + Google Sheet, 5-minute Redis cache) for customer support.

WMS — Warehouse Management System — *NestJS · Prisma · React Native · Vue 3*

- Designed a 25-model Prisma schema and an EPC/RFID item-tracking state machine (Generated → Inbound → Allocated → Outbound → Quarantine → Returned/Disposed) for end-to-end warehouse traceability.
- Built a Vue 3 + Tailwind admin portal with ApexCharts reporting and a 5-tier RBAC/JWT permission system; containerized the full 3-tier stack (NestJS API, Vue admin, React Native handheld app) with Docker.
- Hand-wrote native Android RFID and barcode-scanning modules (Java/Kotlin) bridged into React Native for handheld warehouse devices; tracked QA across 10 modules.

PoleSyncTech — Smart Pole IoT Platform — *MQTT · Node.js · Socket.IO*

- Built a real-time pipeline (MQTT → Node.js → MySQL → Socket.IO) ingesting sensor data across 6 monitored domains, including air and water quality indices.
- Shipped three separate front-ends for one platform: a resident-facing QR web app, a React (v19) + Vite authority dashboard, and a React Native + Expo maintenance app.

SmartPole AI Chatbot — *n8n · LangChain · Pinecone RAG*

- Built a Pinecone RAG pipeline with automatic Google Drive ingestion (polling every minute, 500-token chunks, 20-token overlap) for knowledge-grounded responses.
- Designed a 4-stage text-to-SQL pipeline (generate → validate → execute → summarize) over a 12-table schema, restricted to SELECT-only queries with a 10-row limit for safety, with 50-message conversation memory.

FrostEdge — Smart Freezer Monitoring System — *ESP32 · Real-time alerting*

- Built a real-time multi-tenant B2B web admin system on an 8-table relational schema, integrating ESP32 sensors with Telegram/email alerting for freezer-unit monitoring.

PAYT — Recycling Rewards App — *Final Year Project · Flutter · Firebase*

- Built a Flutter/Dart mobile app with Firebase backend rewarding users with cash for returning recyclables across 10+ material types.

Education

Bachelor of Computer Science (Software Engineering), Honours — CGPA 3.59

Universiti Teknologi Malaysia · Sept 2021 – Oct 2024

Foundation in Engineering — CGPA 3.35

Universiti Teknologi Malaysia · June 2020 – June 2021

Languages

Malay (Native) · English (Proficient)
